

PROJECT SUMMARY – Auto Body and Repair Shops

CLIENT: Confidential Client(s)

PROJECT: Waste Management and Indoor Air Quality (IAQ) Assessments

PROJECT CHALLENGE:

Evaluate waste generation and management activities and indoor air quality of shops, develop waste minimization strategies, and train employees regarding universal and hazardous waste management and employee exposure regulatory requirements.

SCOPE OF WORK:

The scope of the project involved meeting with site personnel, evaluating existing operations, and waste generation and management activities as well as conducting an analysis of indoor air quality (IAQ) to assist in ensuring employee safety.

Mostardi Platt met with site employees to discuss project objectives to address employee concerns. A waste management audit was conducted, wastes were sampled for analysis, indoor area and personal air samples

were collected and analyzed, and waste minimization strategies developed.

Mostardi Platt also provided training and guidance to employees regarding hazardous and universal waste generation and handling strategies to minimize the types and amounts of waste generated.

Completed project on budget and continue to provide ongoing consulting services on an as needed basis.
